

Possibilities

Q1 is a system of many possibilities. In its original design Q1 is perfectly suited for an ordinary room in a home. But what about rooms that don't fit the norm? Low ceiling, obstructing walls or other obstacles... No problem! Q1 can be equipped with individually controlled nozzles that can be positioned to give almost any room an optimal protection. In the same manner several rooms can be protected individually using only one Q1. A few, but far from all, possible installations are shown below.
